## **ABSTRACT**

It is now a trend that people are starting to use online maps on their computers, smart phones, tablets and other devices a lot more than we used to. People are one of the on the go consumers of these kinds of technology, the one who is not familiar in some places can locate the destination he/she wants to go without any hassle and reach the location where he/she want to be. In accordance with this, the researchers came up with a study and proposed a stand-alone windows application which involves people and their own device in order to give an advantage for them know the new and what is in with the technology in this generation so that the usage of their gadgets is meaningful.
